

Why Migrate?

An overview of the reasons and costs to upgrade your software.

Why should I spend money to upgrade from my proven software to a new version?

Typical users see the upgrade and migration process as fraught with problems, both technical and cultural. Upgrades often end up being painful, but they don't have to be. Proper project management from an experienced vendor can mitigate the host of issues that can influence an upgrade.

Why do I need to change? My Current Version works just fine.

This may be true but the technology that surrounds your application is constantly changing. Operating system updates, database, remote access and security, just to name a few, are unavoidable changes. qdata is continually testing and certifying RF Plus with these new technologies. Your mission critical application software will eventually become unsupported if you don't update. The risk of not staying current increases with time. qdata ceases to support the surrounding platform when the vendor does, for example Microsoft Windows 95.

What is the best time to upgrade?

Many people choose to upgrade when they are forced to make changes in the surrounding technology. This is not the best time to upgrade. Remember, you purchased RF Plus to take advantage of the labor savings offered by its features and to keep your competitive edge. The latest version will have new features to reduce costs and to maintain and extend your competitive advantage. Make continuous upgrades and training part of your culture. This will make continuous ROI part of your business model.

RF Plus Migration Services

Item	Description	Typical Cost
RF Plus Upgrade	You will receive the latest version of RF Plus. Your upgrade includes all the RF plus modules originally purchased.	Free with your paid service contract.
Gap analysis	This process documents the features in the clients legacy version of RF Plus that are not found in the qdata standard version of RF Plus.	\$1500.00 - \$3000.00
